

Igor Marchuk

Support Engineer | Enterprise & Strategic Accounts | API · SSO/SAML · LLM & Claude

San Jose, California (SF Bay Area) • U.S. Citizen • (650) 495-8481 • igor@fsmaster.com • linkedin.com/in/igormarchuk • github.com/fsmaster

PROFESSIONAL SUMMARY

Technical Support Engineer with 12+ years supporting strategic enterprise customers as the named, dedicated escalation point for Google's largest accounts. Expert at investigating, diagnosing, and resolving complex technical issues end to end — reading error logs, request traces, and HAR captures, and partnering with Engineering and Product to drive resolution. Hands-on troubleshooting of SSO, SAML, OAuth, and enterprise authentication flows.

Fluent with APIs and technical SaaS, Python/Bash scripting, SQL, and cloud (GCP). Deep, current knowledge of LLMs and AI agents — Anthropic Claude and Claude Code operations plus multiple Google Gemini and Agent Development Kit certifications. Strong written communication and user empathy; builds the foundational, often unglamorous work — runbooks, playbooks, and documentation. Bachelor's in Computer Sciences; based in the SF Bay Area; U.S. Citizen.

PROFESSIONAL EXPERIENCE

Named Technical Support Engineer / L3 Escalation — Strategic Enterprise Accounts

EPAM Systems – Google Client

February 2017 – Present (9+ years) • San Jose / Mountain View, CA

- Served as the named, dedicated technical support contact for Google's most strategic (Platinum) enterprise customers — known by name to their stakeholders, embedded in their shared channels, and joining recurring account cadences as the support voice.
- Owned customers' technical support needs end to end: investigated, diagnosed, and resolved complex issues directly, and partnered with internal Engineering and Product teams to drive resolution when needed.
- Built deep, durable context on each customer's architecture, integrations, and use cases to respond with nuance rather than from a script.
- Performed hands-on troubleshooting of SSO, SAML, OAuth/OIDC, and enterprise authentication flows between Google Workspace and third-party identity providers (Okta, ClassLink, Clever).
- Read and analyzed error logs, request traces, HAR files, and packet captures (Wireshark, mitmproxy), and investigated source code (C++, Python, Java) to root-cause defects — reverted and resolved 200+ bugs.
- Captured technical feedback and product friction from accounts and routed it to Product/Engineering with the impact data and detail needed to prioritize it correctly.
- Managed high-urgency issues with extreme ownership and coordinated cleanly with the broader support team for continuous coverage.
- Helped build the support function's foundations — authored runbooks, playbooks, escalation paths, and public + internal documentation (Support Hub).
- Led an onsite vendor team of 6 engineers; partnered closely with cross-functional stakeholders without owning the commercial relationship.

Key skills applied: API troubleshooting, SSO/SAML/OAuth, Python, Bash, SQL, GCP, Wireshark, mitmproxy, HAR analysis, Buganizer, runbook authoring.

Lead Application Support Analyst — Enterprise Accounts

EPAM Systems – Barclays Capital

August 2010 – February 2017 (6.5 years)

- SME and L2/L3 support lead for 20+ business-critical enterprise applications in a high-stakes, regulated financial environment.

- Owned incident response, root-cause analysis, and high-urgency escalations; coordinated change management and disaster-recovery testing.
- Built automation and reporting tools in Python and Perl; coached and mentored junior engineers.

Systems Administrator & IT Support Owner (earlier experience)

[Bilink ISP LTD](#) • [Independent IT Services](#)

2002 – 2011

- Built and supported IT infrastructure for 10,000+ users; owned end-to-end service delivery, monitoring, and direct end-user/customer support.

OPEN-SOURCE PROJECT

fsmaster-sso — SAML 2.0 + OIDC Identity Provider (Pure Python)

[sso.fsmaster.com](#) • [github.com/fsmaster/fsmaster-sso](#)

- Built a SAML 2.0 and OpenID Connect Identity Provider from scratch in pure Python (no libraries) to master authentication protocols at the wire level — signing/validating assertions, ID tokens, and OAuth 2.0 flows; used for hands-on SSO troubleshooting and customer test scenarios.

TECHNICAL SKILLS

Enterprise & Strategic Support: Named-account / designated support, escalation & incident management, extreme ownership, embedded (Slack) support model, cross-functional partnership, runbooks & playbooks

APIs & Debugging: REST APIs, error logs, request traces, HAR analysis, Wireshark, mitmproxy, Chrome DevTools, source-code debugging (C++, Python, Java)

Identity & Authentication: SSO, SAML 2.0, OAuth 2.0, OIDC, Okta, ClassLink, Clever, Google Workspace, Active Directory, certificate / PKI

AI / LLM & Agents: Anthropic Claude & Claude Code operations, Google Gemini Enterprise, AI agents (Agent Development Kit / ADK), Gemini CLI, Model Armor, prompt engineering, ChatGPT operations

Automation & IaC: Python, Bash, PowerShell, Perl, SQL; Terraform, Ansible, Puppet, GitHub Actions / CI-CD

Cloud & Infrastructure: Google Cloud Platform (Professional Cloud Architect), GCP Cloud Logging, Kubernetes, Docker, Linux, Windows, macOS, ChromeOS

Collaboration & Docs: Embedded/Slack support, Jira, ServiceNow, Confluence, Buganizer, technical writing

CERTIFICATIONS

- **Google Professional Cloud Architect** (2018)
- **Deploy an Agent with Agent Development Kit (ADK)** — Google (2026) NEW
- **Add Agents to Gemini Enterprise** — Google (2026) NEW
- **Deploy Gemini Enterprise with Workspace Data Sources and Model Armor** — Google (2026) NEW
- **Streamline Application Development with Gemini CLI** — Google (2026) NEW

EDUCATION

Bachelor of Computer Sciences

[University of State Fiscal Service of Ukraine](#)

Specialty: Intelligent Control and Computing Systems
